Interface document for use with Activity 3

Object Names

Add a screenprint that shows the names of all objects in the database.

Ensure the names are not truncated

Menu

Add a screenprint of the Menu form in ***form*** view

Add a screenprint of the Menu form in ***design*** view

Add screenprints of all code and/or macros you have used

Ensure you have included enough detail to fully show how the menu works

Input form to register a new customer

Add a screenprint of the customer registration form in ***form*** view

Add a screenprint of the form in ***design*** view

If applicable add ***design view*** and ***datasheet view*** screenprints of any other forms used (eg subform)

If applicable add ***design view*** and ***datasheet view*** screenprints of any queries the form uses

Add screenprints of all code and/or macros you have used

Ensure you have included enough detail to fully show how the form works

Input form to purchase seats if they are available

It should show the relevant event, customer and seat sale information. In addition it should show the total cost for adult tickets, the total cost for child tickets and the overall cost.

Add a screenprint of the input form in ***form*** view

Add a screenprint of the input form in ***design*** view

If applicable add ***design view*** and ***datasheet view*** screenprints of any other forms used (eg subform)

If applicable add ***design view*** and ***datasheet view*** screenprints of any queries the form uses

Add screenprints of all code and/or macros you have used

Ensure you have included enough detail to fully show how the form works

Queries

(1) a query to display an alphabetically sorted list of customers from Dilmouth showing customer names and telephone numbers

Add a ***design view*** screenprint of this query

Add a ***datasheet view*** screenprint of this query

Ensure the detail can be seen in full

(2) a query to update the town name of Lower Marsdon to Lower Marsden

Add a ***design view*** screenprint of this query

Ensure the detail can be seen in full

(3) a query that would allow a user to enter the parameters event date and seat type. Display the event description, customer names and post codes

Add a ***design view*** screenprint of this query

Ensure the detail can be seen in full

(4) a query to display the number of seats remaining for each event. It should show the event description, total adult seats sold, total child seats sold and the total number of seats remaining

Add a ***design view*** screenprint of this query

Add a ***datasheet view*** screenprint of this query

Ensure the detail can be seen in full

Report

a report that shows customer sales information. It should display the forename, surname, number of adult seats bought and number of child seats bought for each customer. Calculate and display the total number of seats each customer has bought and the sales income this would generate, without any child discount. Calculate and display the overall number of seats sold and sales income without any child discount.

Add a ***design view*** screenprint of the report

Ensure the detail of any calculations etc can be seen in full

If applicable add ***design view*** and ***datasheet view*** screenprints of any queries the report uses

Ensure you have also saved a pdf version of the database report
